Summary

Retail department manager who uses Power BI sales data to drive assortment decisions across five flooring departments, which are at 106.7% to budget with a 16% comp YTD. Builds tools in Excel, Google Sheets and Apps Script that automate reporting, including one now being pitched for company-wide adoption. BS in Game Design (Full Sail University) with Python, SQL and C# experience.

Skills

- **Data and BI:** Power BI, Excel (Office Scripts), Google Sheets, Google Apps Script
- **Languages:** Python, SQL, JavaScript/TypeScript, C#
- **Tools:** Git and GitHub, REST APIs, Unity

Experience

Floor & Decor, Georgetown, TX

Wood Department Manager (also Laminate & Vinyl, Tile and Stone) | October 2024 to present

- Lead 9 associates across five flooring departments, now at 106.7% to budget with a 16% comp YTD.
- Grew Wood to 133.8% to budget and a 35.4% comp YTD, after finishing 2025 at 97.4% to budget against the store's 81.2%.
- Took over an underperforming Tile department in July 2026 that finished 2025 at 63.9% to budget; it is now at 117.9% to budget YTD.
- Found that a company-wide decline in red/pink sales reflected limited availability, not weak demand: where offered, red/pink earned 32% of sales from 16% of SKUs. Expanded red/pink options, including Hickory Mill.
- Added 42 vinyl SKUs chosen from Power BI trend analysis; the additions produce about 40% of department sales YTD, including the top seller, while the legacy assortment declined 7%.
- Trained associates on installation and prep products for each core line, raising average ticket comp 8.5% YTD.
- Built an Excel room-scene sign tool that cut sign creation from 4 minutes to 30 seconds per display across about 30 floor displays; the signs and tool are being pitched to the CEO for company-wide adoption.
- Built an Office Script that cuts weekly STIR report formatting time by 75% across five departments; requested by the district manager.

Connected Customer Supervisor, Designer, Pro Assistant Manager | March 2023 to October 2024

- Promoted through three roles before department manager.

Projects

MTG Pack EV Tool | Google Sheets, Apps Script, Scryfall API

- Built an expected value model that tells a game store whether Magic: The Gathering booster packs are worth more sealed or opened and sold as singles.
- Pulls live prices for every printing in a set through the Scryfall API, then models realizable value after marketplace fees, below-market sale prices, shipping costs and a minimum listing value.
- Validated outputs against official product contents; found and fixed a column-reference error that zeroed out most card values, and removed collector-only cards that inflated draft booster EV.

Hero of the Banished (capstone) | Unity, C#

- Programmed the core systems of a team-built 3D action puzzle game: player movement, climbing, dodge rolls, combat, camera and lock-on targeting.
- Designed two levels: a timed collapsing tower and a dungeon with multiple paths to the exit.

Tabletop games | thebluewombat46.itch.io

- Designed and published two print-and-play games, including a dice game refined through four weeks of tracked playtests and probability analysis.

Education

BS, Game Design | Full Sail University

Former professional soccer player in Germany.
